EDSUK Turnstile Hire

Outline Specification: EDSUK Turnstile Hire

We have a large range of Turnstiles for Hire, Half Height Turnstiles, Full Height Turnstiles, both Internal & External Use. Additional systems such as a side DDA Wide Access Gate, Pushchair Gate or Delivery Gate etc.

DDA Access Gate Turnstile Hire
A range of DDA compliant access gates can be installed to accommodate disabled users, pushchairs and deliveries etc. Customised units can be constructed to suit your exact requirement

Turnstile Hire Counting Systems
The Turnstiles can also be linked to a counting system, to either count locally with both "in" and "out" tally's or people counts, or alternatively the count data can be transmitted to a central location, where the data can be displayed by individual Turnstiles or a group of Turnstiles for example one entrance or exit, which can be transmitted to a control room for larger venues and once the tally amount is reached (i.e. maximum capacity) then the Turnstile prevent others from entering. Counters on the portable turnstiles can only be re-set to zero by a key-holder, thus avoiding any tampering with the count. The units can be used indoors or outdoors. Access can be individually controlled by a steward/ticket collector, or the units can be set up on 'free-flow' to simply count the number of people passing through. Additional functionality such as ticket or cash can be used with barcode readers etc.

Access Control Integration
Additional security can be added for perimeter protection alarms, to prevent people from gaining access without authorisation, i.e. fence hopping, cutting through unauthorised areas, all of which can be controlled at a command point via radio or wireless communications, negating the need to run cables around the site. We are also able to offer additional security systems linked to the turnstiles: Barcode Labels / Proximity Card or Tag Systems / Biometric Fingerprint Recognition Systems / Biometric Hand Recognition Systems / Biometric Facial Recognition Systems
